Welcome to our 2022/2023 parts catalog! When we made our last catalog we were hoping that Covid/Coronavirus would be in our rear view mirror by now. It seems to be hanging in there. We hope that this finds you and yours healthy and happy and not affected by Covid.

## A little about us:

We began in 2002 as a small part-time business selling parts for the flathead V8 powered cars and trucks. We've grown each year and, beginning with 2008, made the business a full time operation selling parts. Our main warehouse stocks primarily mechanical parts, as you can see from the offerings in this catalog.

**W**e also developed a rebuilding service for the early Ford transmissions, which has expanded into the Borg Warner overdrive types. This specialty rebuild facility averages 50 to 60 transmission overhauls each year. Some of our rebuilt transmissions have been run in a number of vintage auto race events, including *The Great Race*, the *Race of Gentlemen*, and the *Peking to Paris* race, among others.

It has always been our goal to provide the best available quality parts to our customers. We strive to build our knowledge base on everything we sell, in order to recommend the correct part for your application, whether you are restoring an early Ford or building a vintage hot rod. We have developed a significant data base of technical specifications on many parts, which gives us that edge in knowing what we sell. We have most of this information online though our technical pages and our service tips at our website <a href="mailto:vanpeltsales.com">vanpeltsales.com</a> for additional technical drawings, additional photos, and a variety of service tips.

Our online store <u>vanpeltsalesstore.com</u> has limited items but we are working to build that and add more products for sale.

Thank you to our regular customers for your continued business, and to our new customers for giving us the opportunity to provide you with your restoration needs.

Sincerely, Mac & Shelly Van Pelt

18-	6397	Dowel Pin - Trans case to engine block (3/8" dia) - 2 req'd - each:		\$2.00
	350329-S2	Bolt - Pressure Plate to flywheel (special 5/16-18) set of 6		Use 350433-S
	350433-SK	Bolt - Pressure Plate to flywheel (special 5/16-18) set of 6		\$14.00
	350645-S	Bolt - Flywheel to Crankshaft (see B-6376S above)		
7RA-	7609	Retainer Ring (flywheel bolt retaining) - (32-53 V8)	\$7.50	
8RT-	6410	Retainer - Flywheel housing (48-52 trucks) - seals sold separately		\$32.00
8BA-	6411	Dust Seal - Flywheel housing (49-53 cars)		\$18.00
8RT-	6424	Dust Seal - Flywheel housing retainer - lower (48-52 trucks)		\$9.00
8RT-	6425	Packing - Flywheel housing retainer - upper (48-52 trucks)		\$4.00
B4A-	6436	Seal - Starter motor to flywheel housing (54-64 Y-block V8)		\$12.00
		FLATHEAD ENGINE - V8 Valve Package	Specified For	\$ New
8BA-	6505-KF	Complete Valve Kit for V8 Engine (with Ford 0BA valve springs)	1933-53	\$285.00
8BA-	6505-KL	Complete Valve Kit for V8 Engine (with LZ 86H valve springs)	1933-53	\$315.00

Note: Kit includes 16 each valves, 1 pc guides, springs, spring retainers, guide retainers, keepers, and 8 oil seals. Add \$45.00 to the package price if you want to change to the heavy coil LZ valve springs instead of the standard springs.

	FLATHEAD ENGINE - Valves & Valve Components			
52- 6500	Tappet - Slotted - Hollow (New) for V8-60 Set of 16:	1932-53	\$175.00	
82- 6500-KH	Tappet - Hollow Adjustable for V8-60 Set of 16:	1937-39	\$335.00	
18- 6500	Tappet - Slotted - Hollow (NOS) Each:	1932-53	\$3.95	
91A- 6500	Tappet - Solid side - Hollow (NOS) Each:	1932-53	\$3.95	
91A- 6500AD-S	Tappet - Solid Adjustable Each:	1932-53	\$14.95	
91A- 6500AD-H	Tappet - Hollow Adjustable Each:	1932-53	\$16.50	
91A- 6500KH	Tappet - Hollow Adjustable Set of 16:	1932-53	\$250.00	
91A- 6500WRN	Wrench set for adjustable tappets	1932-53	\$9.95	
52- 6505	Valve (Intake or Exhaust) - Mushroom Tip (60hp)	1937-40	\$19.95	
1GT- 6505	Valve (Exhaust only) - Mushroom Tip (G series six)	1941-47	\$11.95	
7HA- 6505	Valve (Exhaust only) - Straight Stem (1.51" dia x 5.36" long)	1947-50	\$7.95	
11T- 6505	Valve (Intake or Exhaust) - Mushroom Tip	1932-48	\$15.95	
8BA- 6505	Valve (Intake or Exhaust) - Straight Stem (4.490" long)	1932-53	\$7.95	
1BA- 6505	Valve (Intake or Exhaust) - Straight Stem (4.540" long)	1951-53	\$11.00	
1BA- 6507	Valve (Intake only - Straight Stem (4.54" long)	1951-53	\$7.95	
5GA- 6507	Valve (Intake) - Mushroom Tip - Six Cyl G series	1945-47	\$8.95	
7HA- 6507	Valve (Intake) - Straight Stem - Six Cyl H series	1947-51	\$15.95	
40- 6510	Valve Guide (split type) - 85/95hp	1933-48	\$7.95	
52- 6510	Valve Guide (split type) - 60hp	1937-40	\$8.95	
8BA- 6510	Valve Guide (one piece type) - 85/110hp	1933-53	\$4.75	
1GA- 6510	Valve Guide (split type) - G series Six - Exhaust Valve side only	1941-47	\$7.95	
7HA- 6510	Valve Guide (one piece type) - H series Six -Int & Exh valves	1947-51	\$9.95	
40- 6512	Retainer - Valve Guide (horseshoe clip) - 85-110hp	1932-53	\$1.65	
52- 6512	Retainer - Valve Guide (horseshoe clip) - 60hp	1937-40	\$2.50	
52- 6513	Valve Spring (intake or exhaust) - V8-60hp	1937-40	\$6.95	
78- 6513	Valve Spring (intake or exhaust) - 2.41" long x 11½ coils - V8	1932-53	\$2.95	
0BA- 6513	Valve Spring (intake or exhaust) - 2.48" long x 10.1 coils - V8	1932-53	\$4.95	
1BA- 6513	Valve Spring (intake or exhaust) - 2.20" long x 9.1 coils - V8	1951-53	\$6.95	
86H- 6513	Valve Spring (intake or exhaust) - 2.40" long x 91/4 coils - V8	1933-53	\$5.95	
0HA- 6513	Valve Spring (intake or exhaust) - 2.56" long x 9.38" coils (Six)	1947-51	\$7.50	
40- 6514	Retainer - Valve Spring	1932-48	\$1.25	
8BA- 6514	Retainer - Valve Spring (use with 8BA-6505 valves)	1932-53	\$2.00	
1BA- 6514	Retainer - Valve Spring (use with 1BA-6505 valves)	1951-53	\$1.75	
7HA- 6514	Retainer - Valve Spring (use with 7HA valves) - H series six	1947-51	\$1.50	
1BA- 6517	Sleeve - Valve Retainer (use with 1BA-6505 and 1BA-6514)	1951-53	\$5.00	
7HA- 6518	Lock Keys (2) - Valve Spring (use with 8BA/1BA-6505 valves)	1932-53	\$1.75	
52- 6521	Intake Manifold Gasket (1937-40) - 60HP		\$19.50	
40- 6521B	Intake Manifold Gasket (1932-48) - 85/100 HP		\$14.50	
8BA- 6521	Intake Manifold Gasket (1949-53) - 100 HP	<u> </u>	\$14.50	
8EL- 6521	Intake Manifold Gasket (1949-51) - 337 cu in V8		\$26.50	
C0AE- 6521-A	Valve Chamber Cover Gasket Set (54-62) - 239-272-292-312 V8		\$11.50	
B4AZ- 6A506-A	Rocker Arm Cover Gasket Set (54-62) - 239-272-292-312 V8		\$17.50	
48- 6524	Oil Baffle - Valve Chamber - USED	\$6.00	\$12.00	
8BA- 6571	Seal - Valve Guide (for 8BA type valve guides - intake side)		\$1.25	
C1TE- 6571-C	Seal - Valve Stem - Set of 16 - 239-272-292-312 (1954-62)	1	\$18.50	
40- 6057-A	Valve Seat Insert (1.653" OD) - 1933-53 V8 (exc 60hp)	1	\$5.95	
Note: The 1949-50 style valve assembly can be used in any 1933-53 flathead V8 (221-239-255 cu in) engine as				
long as you use the entire assembly. Parts cannot be inter-mixed with the 51-53 style valve assembly.

•	tes: the various gears listed above are all specific to the vehicle's rear end gear ratio AND the		

Calculate the tooth count carefully before ordering. Less teeth on the driven gear makes the speedometer read faster.

Do you need technical help? Go to www.vanpeltsales.com and see our extensive pages of technical and parts drawings, tune up specs, service tips, serial number information, engine ID, and model ID. The technical information is listed in the gray box below the Vanpelt sales header on the main pages.

Do you want to see photos of parts? Go to www.vanpeltsales .com and see the parts prices in the yellow box on the front pages. When you open the price pages you will see the 3rd column has a link toa photo that should open a new browser window with an image of that part (when available). We are adding images all the time.

A note about our online store. Our online store is located at www.vanpeltsalesstore.com and continues to be a work in progress. We add items as time permits. We have chosen not to put all items on the store as the likelihood of ordering the wrong parts is high. It is our intent to provide you with the best shopping experience that does not include parts being returned because they are wrong. Sometimes the best service is the conversation about your parts to ensure you get the right parts. Thank you for your understanding.

### Typical 1937-39 Type Topload 3 Speed Transmission

Typical 1940-48 Side Load Three Speed Transmission

## Ford and Mercury Transmission Synchronizer Types (Not all parts shown in the drawings are included with the basic 7124 assy)

#### B-7124 and 48-7124

These are the early type synchro assy for 1932 to early 1939 early V8 type. The assy includes the 7108 hub, 7106 sleeve, the 7109 springs and the balls. The B-7124 is used with B-7113 cluster gear, and the 48-7124 is used with the 48-7113 cluster gear.

### 91A-7124 and B5A-7124

This type uses the narrow 7116 inserts and the bronze rings with the narrow slots. This type was used for partial 1939 production, and the same type used in the 1955-66 T-86 overdrive type transmissions. The T86 version uses two of the 7109 retainer springs.

### 01A-7124

The 01A type was introduced for 1940 and was used up through 1948. This type is identified by the 3 balls, springs and inserts. The 7069 brass spacing washer must be used with this type 7105 hub. The bronze 7107 synchro rings have the wide type slots.

#### 51A-7124 and 8M-7124

The 51A and 8M type synchro assembly was introduced in 1945 and was used up through 1962 on the Ford light duty three speed transmissions. The 7105 hub is slightly a slightly bigger length compared to the 01A type, and thus does not require the 7069 washer.

### Mercury 1949-Early 1951

### Ford F-100 Standard Transmission

### Ford 1955-62 Typical Standard 3 Speed Transmission

## Ford 1955-66 Light Duty 3 Speed Transmission for Overdrive T-86 Type

## **BOOKS**

### L-1001

"The Ins & Outs of Early Ford Transmissions" Book

#### **HIGHLIGHTS:**

- \* Over 65 Pages
- \* Over 140 Photos
- \* Gear Application Charts
  - \* Serial Number Charts
- \* Step-By-Step Instructions
  - \* Covers 1932 to 1952

(32-48 Passenger and and 1932 to 1952 Light Truck & Commercial) \$35.00

### L-1017

# Ron Holleran's "NOSTALGIA" Book

This is an authorized copy of Nostalgia, by Ron Holleran. It is an indepth flathead rebuilding manual with photos for practical street use, as well as explanations of why, and why not.

\$27.00

Overdrive Guide \$16.00

Cooling System \$16.00

Shop Kinks \$12.00

12V Conversion \$12.00

The Randy Rundle series of informative and how-to books

## SPECIALTY MECHANIC TOOLS

### **V8 FLATHEAD VALVE GUIDE TOOL**

VGBT Valve Pickle Bar Tool ....... \$ 42.00

The Valve Guide Bushing Tool will help remove and install the flathead V8 valve assembly by compressing the valve spring, which lets the mechanic place the horseshoe clip in place. Long handle provides plenty of leverage. A must have tool for any flathead mechanic!

### **CAM BEARING TOOL**

CBT CAM TOOL.....\$105.00

Precision made camshaft bearing tool removes and installs the cam bearings in all Ford 1933-1953 Flathead V8 motors (85-100 hp type). Save money and do the job yourself!

### TRANSMISSION STAND

Transmission support work stand for 1932 - 1948 Type 3 speed manual transmissions. Safely support your transmission while working on your bench.

The stand bolts to the bellhousing of the transmission while the rear lip supports the rear of the transmission.

T-STAND.....\$45.00

#### **GEAR RATIO CHART**

	ULAN N	ATIO CHART	
Ford Cars & Light Trucks	With the 28-24-18-15/14 Cluster Gear and the 16 tooth Main Drive Gear	With the 29-24-17-15 Cluster Gear and the 14 Tooth Main Drive Gear	With the 29-24-18-14 Cluster Gear and the 15 Tooth Main Drive Gear
85-100HP V8 1932-48	1st Gear: 2.820 to 1	1st Gear: 3.520 to 1	1st Gear: 3.114 to 1
	2nd Gear: 1.604 to 1	2nd Gear: 1.899 to 1	2nd Gear: 1.773 to 1
	3rd Gear: 1 to 1	3rd Gear: 1 to 1	3rd Gear: 1 to 1
Trucks	With the 29-19-17-13 Cluster Gear and the 15 tooth Main Drive Gear	With the 29-23-17-13 Cluster Gear and the 15 tooth Main Drive Gear	With the 29-24-18-14 Cluster Gear and the 15 tooth Main Drive Gear
60 HP V8 1937-40	1st Gear: 3.070 to 1	1st Gear: 3.070 to 1	1st Gear: 3.114 to 1
Note: Ford made the regular 85hp gear set available for 1937-39	2nd Gear: 1.765 to 1	2nd Gear: 1.832 to 1	2nd Gear: 1.773 to 1
commercial vehicles in the optional 73-7006 gearbox. See the 1939 to 1940 gear ratios.	3rd Gear: 1 to 1	3rd Gear: 1 to 1	3rd Gear: 1 to 1
100HP V8 1939-48	With the 28-24-18-15/14 Cluster Gear and the 16 tooth Main Drive Gear		With the 29-24-18-14 Cluster Gear and the 15 Tooth Main Drive Gear
Note: Mercury cars normally would not	1st Gear: 2.820 to 1		1st Gear: 3.114 to 1
have the 29 tooth cluster gear, but the 28 tooth cluster could have been replaced with the 29 tooth.	2nd Gear: 1.604 to 1		2nd Gear: 1.773 to 1
	3rd Gear: 1 to 1		3rd Gear: 1 to 1
1936-48 All	With the 28-24-18-15/14 Cluster Gear and the 16 tooth Main Drive Gear	With the 26-22-18-14 Cluster Gear and the 18 tooth Main Drive Gear	With the 25-22-18-14 Cluster Gear and the 19 tooth Main Driv
	1st Gear: 2.820 to 1	1st Gear: 2.330 to 1	1st Gear: 2.120 to 1
Note: Lincoln and Zephyr cars had the same gears as Ford transmissions from 1936-39. The higher ratio gears did not come out until 1940 but could	2nd Gear: 1.604 to 1	2nd Gear: 1.577 to 1	2nd Gear: 1.430 to 1
have been installed in a 36-39 gearbox.	3rd Gear: 1 to 1	3rd Gear: 1 to 1	3rd Gear: 1 to 1
1951-54 As Listed	With the 28-24-18-14 Cluster Gear and the 16 tooth Main Drive Gear (1949-50)		With the 27-23-17-13 Cluster Gear and the 16 tooth Main Drive Gear (1951-54)
	1st Gear: 2.820 to 1		1st Gear: 2.78 to 1
Note: Beginning with 1951 vehicles, Ford changed to a new style gear with different tooth counts than previously	2nd Gear: 1.604 to 1		2nd Gear: 1.62 to 1
used. This resulted in a slight change in gear ratios from the 1949-50 gearbox.	3rd Gear: 1 to 1		3rd Gear: 1 to 1
1948-64 As Listed	With the 28-24-18-14 Cluster Gear and the 16 tooth Main Drive Gear (1948-50)	With the 27-23-17-13 Cluster Gear and the 16 tooth Main Drive Gear (1951-54)	With the 40-31-21-17 Cluster Gear and the 20 tooth Main Drive Gear (48-64 HD)
	1st Gear: 2.820 to 1	1st Gear: 2.78 to 1	1st Gear: 3.72 to 1
Note: Beginning with 1951 vehicles, Ford changed to a new style gear with different tooth counts than previously	2nd Gear: 1.604 to 1	2nd Gear: 1.62 to 1	2nd Gear: 1.87 to 1
used. This resulted in a change in gear ratios from the 1949-50 gearbox. The Heavy Duty 3 Speed trans is listed for 1948-55.	3rd Gear: 1 to 1	3rd Gear: 1 to 1	3rd Gear: 1 to 1
1932-64 As Listed	With the 43-36-27-17 Cluster Gear and 17 tooth Main Drive Gear (1932-52)	With the 43-36-27-17 Cluster Gear & 27-17 tooth Main Drive Gear (1948-66)	
	1st Gear: 6.40 to 1	1st Gear: 6.4 to 1	
Note: The spur gear 4 speed (non- synchro) was used from 1932-52. The 4 Speed (synchronized) helical gear	2nd Gear: 3.09 to 1	2nd Gear: 3.09 to 1	
was used from 1948-64. Both utilized the same gear ratios.	3rd Gear: 1.69 to 1	3rd Gear: 1.69 to 1	
	4th Gear: 1 to 1	4th Gear: 1 to 1	

Note: The 28 tooth cluster gear came in two varieties where you had either a 15 tooth or 14 tooth reverse gear. Both have the same forward gear tooth counts. A Columbia rear axle overdrive would change all the regular ratios effectively. Also, (except for the truck 4 speed and the HD 3 speed gearboxes) most of the gearsets could be applied in any 1932-48 passenger gearbox, and any 1932-51 pickup truck gearbox.

### **FLATHEAD SERIAL NUMBERS**

Model Year	Make and Engine	Passenger Car Model (note C)	First Serial Number (See note B below)
1932	V8	18	18- 001

	Ford <b>6</b> - 101hp	A3	B3-100,001
	Mercury <b>V8</b> -	BG	53- 5,001H

#### SERIAL NUMBER NOTES

- (a) Ford changed production in late 1947 from the G series to the new H series six cylinder engine. They started new serial numbers for the new engine.
- (b) The serial numbers were stamped without any commas or superfluous 0's (zeros). They have been shown here to help identify the general starting number. For instance, the first 1939 Mercury would have a "99-1" stamped as its serial number (rather than 99-001).
- (c) The serialization applied to trucks and commercial vehicles using these Ford engines. They may have different serial prefixes, but would be inclusive within the serial ranges shown.
- (d) The available records do not show the beginning number for 1939 models with the 60hp V8 engine. According to the Early Ford V8 Club 1938-39 Ford reference book, Ford held up production of the 60hp engine for awhile due to overstock. They stopped building the engine at #54-468,967 on December 23, 1937 and did not resume production until April 20, 1939 with #54-476,288. This indicates that Ford was able to build all of the rest of the 1938 **60hp** vehicles and most of the 1939 **60hp** vehicles with late 1937 engine production inventory.
- (e) According to the same EFV8 Club reference book, the first model year 1939 production V8 (85hp) was #18-4,657,660 which was built Sept. 6, 1938. This conflicts with the "first" number listed above (a difference of 3,341 units).
- (f) In the 1938 model year Ford changed from the 21 stud 85hp V8 to the 24 stud engine. The change occurred with #18-4,380,120 on November 24, 1937.
- (g) Production figures for the 60hp engine must be considered for various groups of numbers that were pulled for reworked engines or simply a group of numbers that simply weren't built (example: a small group of 127 serial numbers not assigned at the end of 1939 motor production.) Although a "total" is shown in the table above, it does not account for such missing engines. Per "The Standard Catalog of Ford 1903-2003" total production of 1940 passenger vehicles with the 60hp V8 is 231,425 units (including coupes, Tudors, Fordors, & station wagons). This does not include additional totals of 60hp engines used in trucks and commercial vehicles.
- (h) For more complete Data Plate decoding information on 1949 thru 1953 Ford cars, refer to the decoding chart. Additional letters between the beginning two digits (letter/number) and the rest of the serial number indicate the assembly plant location. Refer to the decoding chart.
- (i) Letter from the Ford Motor Company to all Ford offices (dated Nov. 4, 1947): "Engine and model numbers for 1948 (Ford) cars the lowest number used with 1948 prefixes for six-cylinder passenger car engines is 87HA-0536. Lowest number used with 1948 prefixes for V-8 passenger car engines is 899A-1984859. Due to inventory of engines at various assembly plants, some 1947 models will have higher numbers than the above. However, the prefix changes will definitely identify the 1948 models from the 1947 models." The serial numbering shown in the chart above reflects this numbering variance.

**Other:** From 1932 through 1948 vehicles, Ford Motor Company stamped the serial number into the top of the driver's side frame rail in three locations. This same number was also stamped into the top of the transmission-to-engine housing portion of the transmission. This location was visible when the floorboard and trans cover plate were removed. Of the frame stamped serial numbers, only the forward-most stamping was visible when looking down into the engine compartment (located between the front crossmember and the dash (firewall). The two other frame locations are visible only when the body is removed from the frame. The serial numbers were metal stamped with numbers/letters approximately 1/4" in height. The number (including the prefixes shown) was always preceded by (and followed by) a stamped "star" similar to an asterisk. It is believed that this was done to prevent someone from fraudulently adding a digit to the beginning or ending of a serial number in order to alter its identification.

**Resources:** The information given in this chart is based on the data given in "MOTOR'S AUTO REPAIR MANUAL". Two versions were referenced: the 1935 to 48 book and the 1946 to 56 book. Also, "The 1938-39 Ford Book" published by the Early Ford V8 Club of America.

Late 1950 to 1953	0BA-12127	0-1	0.30	51/4-61/4	1.32	8¾-10	2.85	10-11¼	3.70
1949-53	7RA-12127C	11/4-21/4	0.40	41/4-51/4	1.70	61/2-71/2	2.85	71/2-81/2	3.70

Note: A 3/8" x 24 adapter may be fitted to the carburetor for your vacuum gauge

#### **General Torque Specifications**

#### 1932-48 Flathead Engines & Transmissions

Bolt Location	Torque Setting Ft. Lbs
	85-100 HP
Main Bearing Bolts or Nuts	80-90
Cylinder Head Nuts (iron heads)	50-60
Cylinder Head Nuts (alum heads)	35-40 *
Connecting Rod Nut (castellated)	35-40
Connecting Rod Nut (self locking)	40-45
Flywheel to Crankshaft (wired)	65-70
Flywheel to Crankshaft (self-lock)	80
Exhaust Manifold Bolts	25-30
Intake Manifold Bolts	23-28
Oil Pump to Block Bolt	12-15
Oil Pump Cover Plate Bolts	7-10
Timing Cover Bolts	12-15
Camshaft Timing Gear Bolts	15-20

Bolt Location	Torque Setting Ft. Lbs
	85-100 HP
Pressure Plate Bolts	17-20
Transmission to Bell Housing Bolts	40-50
Starter Bolts	15-20
Fuel Pump Bolts	6-9
Spark Plug (7/8-16 - iron heads)	34-38
Spark Plug (18mm - iron heads)	28-32
Spark Plug (18mm - alum heads)	24-28
Spark Plug (14mm - iron heads)	24-28
Spark Plug (1mm - alum heads)	20-24
Generator Bracket Bolt	55-70
Water Pump Bolts	23-28
Oil Pan to Block Bolts	15-18

#### 1949-53 Flathead Engines & Transmissions

Bolt Location	Torque Setting Ft. Lbs
	100 - 110 HP
Main Bearing Bolts	95-105
Cylinder Head Bolts (iron heads)	65-70
Cylinder Head Bolts (alum heads)	35-40 *
Connecting Rod Nut (self locking)	45-50
Flywheel to Crankshaft	75-85
Exhaust Manifold Bolts	25-30
Intake Manifold Bolts	23-28
Oil Pump to Block Bolt	12-15
Oil Pump Cover Plate Bolts	7-10
Timing Cover Bolts	12-15
Water Outlet Bolts	12-15
Water Pump Bolts	23-28

Bolt Location	Torque Setting Ft. Lbs
	100 - 110 HP
Camshaft Timing Gear Bolts	15-20
Pressure Plate Bolts	17-20
Transmission to Bell Housing Bolts	40-50
Bell Housing to Block Bolts	37-42
Generator Bracket Bolt	55-70
Starter Bolts	15-20
Fuel Pump Bolts	6-9
Spark Plug (14mm - iron heads)	25-30
Oil Pan to Block Bolts	15-18
Truck Pan Cleanout Plate bolts	10-15
Oil Pan to Rear Engine Plate	10-15

<sup>\*</sup> Aftermarket aluminum heads - Use the torque setting recommended by the manufacturer.

NOTE: Follow the cylinder head fastener tightening sequence (available at vanpeltsales.com and other sources). Be sure to perform follow-up torquing after one or two heat cycles, to retighten as needed. Be sure that the torque wrench reads accurately.

## Clutch Chatter.... by Mac VanPelt

A frequent complaint among owners of older manual transmission cars and trucks is the issue of clutch chatter. This annoying condition rears its ugly head when the driver attempts to engage the clutch from a full stop, in either first gear or reverse gear. It can be more obvious in one versus the other. Once the vehicle is moving, the issue is generally not noticed during higher speeds and shifting into the higher gears. This list of conditions may help you pinpoint the problem area in your vehicle. Sometimes the repair is fairly simple and inexpensive, and other symptoms are more difficult to make the necessary corrections. If it's a subtle condition in your car, you may decide to adjust your driving (clutch engagement) technique to minimize the chatter and let things go. If the chatter is shaking the entire car badly, you should try to fix the problem as the heavy vibrations can cause other damage to the vehicle over time.

First, always be sure that you have the clutch properly adjusted. Your clutch linkage has an adjustable clevis that allows you to adjust the free play in the clutch pedal. This means that when adjusted properly, you have approximately 1" to 1½" of pedal travel at the upper range (pedal up) before the clutch begins to press on the pressure plate fingers (pedal moving down). By disconnecting the clevis to the clutch release shaft, you can rotate it to lengthen or shorten the linkage, then reconnect the clevis. This procedure is usually done from below the car, but the adjustments might be done from inside the Ford 1932 through 1948 cars with the floor boards removed.

The following is a list of possible conditions that might affect the smooth action of the clutch. These are not listed in any particular order of importance.

- 1) Worn out clutch pressure plate (loose or broken springs, warped friction plate, broken bent or out of adjustment fingers. **REMEDY**: replace pressure plate with a new or rebuilt. If the pressure plate is known to be recently new or replaced, and is the old style with small adjustable contact bolts on the three fingers, they must be adjusted to provide the same contact point with the clutch release bearing. This is usually done by the clutch manufacturer. Some pressure plate fingers have small adjusting bolts/screws at the finger ends. These are not for primary clutch adjustment, but are to assure that the fingers come into contact with the release bearing at the same moment.
- 2) <u>Loose pressure plate bolts</u>. The six bolts that hold the pressure plate to the flywheel should be tight (with lock washers) and torqued properly (17-20 ft/lbs). **REMEDY**: Tighten to spec.
- 3) Worn out clutch disc. Particularly the possibility of a broken/cracked marcel plate, or loose/broken springs. The marcel is the thin steel plate that is sandwiched in the two layers of friction material. These thin plates have a slight curve to absorb sudden clutch engagement. Many clutch discs also have several (4-5-6) tightly coiled springs captured around the center hub. **REMEDY**: Replace with a new or rebuilt clutch disc.
- 4) Worn or warped flywheel. If the surface that mates with the clutch disc is scored, or the flywheel is warped, the clutch disc will not mate evenly with the flywheel. **REMEDY**: replace the flywheel with a new one, or have your flywheel (or another available used one) resurfaced at a machine shop. This will true up the friction surface again. Check the used flywheel for fine cracks in the friction surface before spending money to have it resurfaced as they may become a problem again after a short time of use. Also, check the runout of the flywheel with a dial indicator. You should not see more than 0.005" of runout (measured near the outer diameter of the flywheel).
- Morn, saggy, oil-impregnated motor mounts. After time, the rubber mounts become too soft and allow too much lateral movement. This would include both the front motor mounts, and the rear mount which is bolted to the rear of your transmission. **REMEDY**: If you have the 1932-36 type rear support, you have the large round rubber ring which was vulcanized to the metal support on the trans. This type requires disconnecting the torque tube cap, and unbolting the rear support & bearing retainer from the back of the transmission in order to replace the rubber component. If you have the 1937-41 style support, your trans is supported by the same "donut" style mounts as the front of the engine. They are easily replaced by jacking up the trans slightly, and unbolting the donut mounts to install new ones. The 1942-48 rear support uses a single saddle-shaped mount (rubber bonded to steel) that again is easily removed when the trans is lifted slightly with a jack. The 1949-53 type rear supports are easily accessed under the trans tail housing under the support cross member.

VanPelt Sales, LLC 81 VanPeltSales.com

### Clutch Chatter.....continued

- 6) Any loose bolts that attach the transmission to the motor, or the flywheel to the crankshaft, or the trans to a bell housing if so equipped, or to the torque tube. **REMEDY**: Tighten all bolts. Replace lock washers with new ones if needed.
- 7) Anti-chatter rods. Ford installed these two steel rods on most V8 cars and trucks from 1933 through 1941. Called radius rods, they carried Ford's basic part number 6044, and they were produced in three different versions (lengths). They were not used with 1942 or newer vehicles. The rods can help control engine front-to-rear movement, and are fitted into "ears" on the back of the engine block, and bolted to the frames X rails. The forward ends were threaded with fine thread and used a castellated nut at the end. REMEDY: Check the rods for tightness. Adjust the nut against the engine block to put some tension on the rod. I do not have any specifications for this, so you will have to use common sense on what you do. Overtightening the nuts will put some strain on the casting of the engine block at the ears, and would pull the motor backwards against the front motor mounts.
- 8) Loose radius rod connection for the rear end, or loose rear spring mounting, or loose rear shock absorbers. Consider that if the rear end/axles were allowed to shift about, you could aggravate the smooth operation of the clutch from the natural tendencies of the rear end to twist and move when under load. **REMEDY**: Check all mounting points for the rear radius rods, the spring U-bolts, the spring shackle bushings, and shock absorbers for loose hardware or worn bushings, and tighten as needed.
- 9) Worn engine main bearings. If the mains (particularly the rear main with its thrust surfaces) are worn, the engine's crankshaft will have too much front -to-rear movement, which will contribute to clutch chatter. **REMEDY**: This can be an expensive repair obviously. The engine must be disassembled and the main bearings checked and replaced.
- 10) <u>Looseness or damage in the driveshaft/torque tube</u> (32-48 closed drive). This is difficult to spot from any external inspection. Obviously, check all bolted connect ions. A complete disassembly would provide a more complete picture of problems here. This is more of a last resort in the process of checking for clutch problems.
- 11) Improper mounting between the transmission case and the bell housing. **REMEDY**: Check mounting surface for burrs or dirt that may prevent both surfaces from continuous contact at all points. A cracked gearbox front housing could also contribute to misalignment.
- 12) <u>Poor contact surface</u> where the clutch release bearing hub rides on the transmission front bearing retainer. **REMEDY**: Check bearing hub for excessive wear inside the bore. Check the retainer for wear on its outside diameter (front to rear). Replace either part if you find that the hub can wobble as it moves back and forth on the retainer.
- 13) <u>Bent clutch release fork tips</u>. **REMEDY**: If the fork tips are not aligned in the same plane, replace the fork with a new one, or a good used one if available.
- 14) Worn pilot bearing in the flywheel. **REMEDY**: The bearing helps keep the input shaft (which the clutch disc rides on) aligned. If you have the bushing type bearing (oilite) it may be badly worn inside. Replace with a new bushing bearing or the sealed ball bearing type.
- 15) Worn pilot end on the front of the transmission input shaft (main drive gear). **REMEDY**: Replacement of this gear requires pulling the transmission and tearing it down to replace this gear. Normally, the pilot end may suffer a slight amount of wear that a new pilot bearing in the flywheel can compensate for, but occasionally the pilot is too worn and will allow the input shaft to move excessively during clutch engagement.

Don't forget that the chattering problem can be a sum of several problems, each of which is slightly off the original factory installation. Replacing/repairing one single component may reduce the chattering, but not eliminate it if there is a problem elsewhere. Try to address all the possibilities.

### An Explanation of the Part Numbers.....

The Ford part numbering system was developed differently from the other automobile manufacturers. Although their system has evolved over the decades, our experience is primarily with the early parts from 1932 to the 1960's. There are often exceptions to the "rules" for the factory numbers, so this should not be considered a definitive rule book, but rather a guide when trying to identify a part.

From at least the Model A era (1928-31) Ford used a <u>base number</u> to represent a particular type of part. For example, the number 1015 was always meant to represent a <u>wheel</u>. The number 3575 was always a <u>steering sector</u>, and the 7113 was always a <u>transmission cluster gear</u>. What identifies the actual year and type of that part was the prefix and suffix (letters and numbers were both used).

Sometimes the part was improved or modified for replacement of the original part, and it may have been assigned a suffix letter to identify that. This was often a letter that would have been an "A" with subsequent changes going through the alphabet. The chassis parts manuals produced by the factory would then list that item with its specific new application, or perhaps show it as a replacement for the original part number. Sometimes the suffix letter denoted a variation of the part that makes it a totally different part. For example, the 68-7061 mainshaft for 1936 transmissions had an "A" suffix (shaft with 6 helical splines) or the "B" suffix (shaft with 16 helical splines). Thus you see the same prefix and base number, yet the suffix shows a variation of the 1936 shaft that is not interchangeable from one to the other.

The prefix "A" was used to identify the part as used on the Model A four cylinder passenger vehicles (1928-31). If the part was used on the heavy trucks, it would have the AA prefix. The "BB" prefix went with the 1932 and later heavy trucks.

When the new Model B four cylinder models came out in 1932, the factory used a "B" prefix to identify that part for the new application. Occasionally, the part was essentially the same as the A- version so Ford would use the new B- number but list the part for use back to 1928 on Model A vehicles.

When the new V8 engine came out in 1932 models, the engine parts (and other parts that were unique to the V8 model) were given the 18- prefix. So, for example, a 1932 Ford with the B four cylinder engine would have a B-8600 fan but the V8 model for 1932 would have the 18-8600 fan since the parts were different. However, any other parts that were common to both vehicles, like the B-1201 wheel bearing, would keep the B-prefix since it was placed into the numbering system as a Model B (4 cylinder vehicle) before the Model 18 (V8 vehicle) was introduced.

If the actual part (ie that B-1201 wheel bearing) did not change from one model year to the next, the factory did not change its prefix. The B-1201 bearing was used on all passenger cars and pickup trucks up through at least 1947, so it retained its original part number all those years.

The original plan for this system was to follow the new passenger car model designations as the prefix letters or numbers. Thus, as the part changed, those prefixes evolved as follows:

- B- Referred to the Model B (four cylinder) introduced for 1932
- 18- Referred to the Model 18 (V8) introduced for 1932
- 40- Referred to the Model 40 (V8) introduced for 1933 and 1934
- 48- Referred to the Model 48 (V8) introduced for 1935
- 68- Referred to the Model 68 (V8) introduced for 1936

Here is where another change occurred because of the introduction of the 60hp V8 engine to the line:

#### 74- Referred to the Model 74 (V8-60hp) introduced for 1937

78- Referred to the Model 78 (V8-85hp) introduced for 1937

Then another change to standardize the reference to the 60hp versus the 85hp V8 models with the "1" referring to the 85hp model and the "2" referring to the 60hp model. Another change was the addition of a letter to the prefix. The letter "A" now referred to a passenger car, the "C" in the prefix meant the part was unique to the Commercial vehicles, the "T" in the prefix meant the part was for a Truck application. There were other specialty prefix letters as well.

# 81A- Referred to the Model 81A (V8 – 85hp) Passenger Car introduced for 1938 82A- Referred to the Model 82A (V8 – 60hp) Passenger Car introduced for 1938

The model year 1939 was the first year of the new Mercury model with its larger 90hp V8 engine. So the part numbers changed slightly to reflect the differences in the Ford vs Mercury body and the Ford 85hp vs the Mercury 90hp V8 engine. So now there were three different engines to accommodate in the numbering system, as well as the letter designations for the various vehicle types (passenger car, commercial vehicle, trucks, busses, and so on). Ford continued with this version of the numbers, continuing to use the year of the model as the first number in the prefix. So the 1940 model parts were given the "0" prefix, the 1941 models the "1" prefix, and the 1942 models the "2" prefix.

91A- Referred to the Model 91A (Ford V8 – 85hp) Passenger Car introduced for 1939

92A- Referred to the Model 92A (Ford V8 - 60hp) Passenger Car introduced for 1939

99A- Referred to the Model 99A (Mercury V8 - 90hp) Passenger Car introduced for 1939

01A- Referred to the Model 01A (Ford V8 – 85hp) Passenger Car introduced for 1940 022A- Referred to the Model 022A (Ford V8 – 60hp) Passenger Car introduced for 1940

09A- Referred to the Model 09A (Mercury V8 – 90hp) Passenger Car introduced for 1940

11A- Referred to the Model 11A (Ford V8 - 90hp) Passenger Car introduced for 1941

19A- Referred to the Model 19A (Mercury V8 - 100hp) Passenger Car introduced for 1941

1GA- Referred to the Model 1GA (Ford Six – 90hp) Passenger Car introduced for 1941

21A- Referred to the Model 21A (Ford V8 – 90hp) Passenger Car introduced for 1942

29A- Referred to the Model 29A (Mercury V8 - 100hp) Passenger Car introduced for 1942

2GA- Referred to the Model 2GA (Ford Six - 90hp) Passenger Car introduced for 1942

There was no passenger car production from early 1942 through mid 1945 due to World War II. The change over from military production back to regular vehicles began in late 1945. Following the previous numbering format, Ford used the "5" prefix to denote a 1945 model year, although all 1945 passenger car production was identified as 1946 models. Since trucks were built during the 1945 year, the new parts were given the "5" prefix, even though the parts were often used in the 1946 model year cars. Also, Ford decided to standardize on the 100hp V8 engine for any 1945 – 48 passenger car production, whether it was for a Ford or Mercury car with a V8 engine.

51A- Referred to any 1945 Passenger Models but could retrofit back to earlier models (1942 for example)

59A- Referred to Model 59A/69A (Ford V8 - 100hp) Passenger Car introduced for late 1945 and for 1946

59C- Referred to Model 59C/69C (Ford V8 - 100hp) Commercial vehicles introduced for late 45 and for 1946

5GA-Referred to any 1945 Models (Ford Six - 90hp) introduced for late 1945 and for 1946

After 1947 things began to change again when Ford introduced the new flathead V8 (often known as the 8BA in its passenger car version or the 8RT in the truck version). They also decided to try changing the numbering system so you have to be aware of how this worked. The "8" now refers to the 1948 introduction of this part to the system. Since this new engine was designed and built in late 1947 some of the parts numbers carry a 7RA prefix. Basically the "8" meant the part was new for 1949 models. The "B" in the prefix meant it was a Ford V8 passenger car item. The "R" in the prefix denoted the part as a truck or commercial V8 part, and the "M" in the prefix referred to the Mercury V8 parts. It seems that the part prefix number, in this case the "8" referred to the year that the part was filed into the Ford system. The next variation of the flathead Six engine was designated as the "H" type so that was used in those part numbers unique to this engine.

7RA- Referred to parts used beginning in 1948 Commercial and 1949 Passenger V8 vehicles

8BA- Referred to parts used beginning in 1948 Passenger and Commercial V8 vehicles

8CM- Referred to parts used beginning in 1949 Mercury V8 Passenger vehicles

8RT- Referred to parts used beginning in 1948 Commercial V8 vehicles

7HA- Referred to parts used beginning in 1948 Commercial Six vehicles

8HA- Referred to parts used beginning in 1949 Commercial Six vehicles

0BA- Referred to parts used beginning in 1950 Passenger and Commercial V8 vehicles

0HA- Referred to parts used beginning in 1950 Passenger and Commercial Six vehicles

1BA- Referred to parts used beginning in 1951 Passenger and Commercial V8 vehicles

1CM- Referred to parts used beginning in 1951 Mercury V8 Passenger vehicles

At some point the people in charge in Ford's parts system management realized that the numbers were becoming cumbersome with the passing years, and decided to implement the use of a letter code to denote the decade of the part's introduction. The 1940's were a mis-mash of differing part numbers and prefixes so they began the new system with the 1950's and used the letter "B" as the new prefix to identify the part as a new entry for the 1950's. This letter prefix was followed by the year of the part's model introduction. Thus a new part used on the new 1952 models was given the "B2" prefix. The numbers or letters that followed this prefix were meant to let you know that the part was introduced for a passenger car ("A") or a truck ("T") or a commercial vehicle like a pickup truck or panel van ("C"). There were other numbers and letters that crept into these part prefix identifiers over the years, and it gets a bit more complicated to know exactly what the part was original designed for. As the 1950's ended, Ford used the next letter in the alphabet ("C") to denote the decade of the 1960's. In general, the prefix numbers/letters did away with anything designating the part for V8 versus Six engine applications. Some parts with 1960's type part number prefixes are also used in older vehicles as the factory wished to update all of their numbers for any active movers in the parts system. Many parts cross over from passenger car to truck/commercial applications, so just the one number would be used for both types if the part was identical for both.

B2A- Referred to parts used beginning in 1952 Ford passenger car vehicles

B3TZ- Referred to parts used beginning in 1953 Ford truck vehicles

C3AZ- Referred to parts used beginning in 1963 Ford passenger car vehicle

As I have stated above, there are often various exceptions to the so-called "rules" or formats used by Ford over the many years. Additional prefix letters and numbers were needed to expand the possible parts listings as the years went by.

#### **TERMS OF SALE**

**PLACING AN ORDER BY PHONE**: You may phone your order in to our sales office during regular business hours (Monday to Thursday from 9:00am to 5:00 PM Eastern Time - Closed on Fridays). Our sales office number is **1-513-724-9486**. If we are out of the office or on another telephone call, please leave a message, and we will try to return your call as soon as possible. We do not return international calls outside of North America.

PLACING AN ORDER ONLINE: You may order from our online store (not all products are available this way) at any time - day or night. If the part is not listed in the online store, you must order that part by telephone during our regular office hours. Due to the difficult nature of pricing shipping charges accurately in the online store, the software will calculate the shipping cost for your online orders in a conservative way. This may result in you seeing a high shipping cost on your order acknowledgement. We will adjust the true final shipping costs for online orders to correct for any over pricing of shipping charges. This will be done before the final charge to your credit card is done.

<u>ORDER INFORMATION</u>: We ask that you help us help you by providing as much application detail as possible when placing an order. There are many very similar parts that can be confused with one another. Sometimes a part number is not available, but we can identify the item you need based on our experience, and your efforts to provide additional information, such as measurements or pictures. Refer to our website's parts drawings and our sales department to help guide you.

<u>MINIMUM ORDER</u>: The minimum order is \$10.00 net (excluding shipping costs and taxes and fees). Please consider adding items to your order if it is not sufficient to make the minimum. Our minimum shipping/postage charge is \$9.00.

PAYMENT TERMS: All orders must be paid for at the time of the order. We accept VISA, MASTERCARD, DISCOVER CARD, and AMERICAN EXPRESS credit cards. We also accept money orders and checks, but we must allow approximately 10-14 days for these to clear the bank before the order can be shipped. We do not accept bank wire transfers. We are not set up to accept PayPal. We will not ship any orders COD. Unless otherwise stated, the shipping and handling costs will be added to all orders. Any applicable sales taxes will also be added to qualified orders. International orders may require a written confirmation of the order, which may be provided via email or facsimile.

MERCHANDISE RETURNS: Excluding electrical or electronic parts, non-stock special order parts, and books/literature, merchandise may be returned upon request, within 60 days from the invoice date. Items sent to you in good faith, that have fulfilled the order correctly, may be returned with prior authorization only from VANPELT SALES LLC. Please contact us by phone or in writing to request a Return Authorization. Returned merchandise must be sent to us freight prepaid, and is subject to a 15% restocking charge. All returns must be in their original packaging and in original or new condition. Additional packaging costs may apply for merchandise that arrives in torn, crushed, or otherwise damaged or missing packaging. NO returns after 60 days from the invoice date. NO returns are allowed for any books or manuals at any time. All literature sales are considered final.

Defective merchandise will be accepted for return on a case-by-case basis. Prior authorization is required before sending such merchandise back to us. Credit will be issued upon inspection and confirmation of defects. In no cases will we be liable for additional costs such as labor, or replacement parts you purchase elsewhere. Items will be replaced or credited solely at our discretion. NO returns after 60 days from the invoice date.

Some engine piston sets are considered to be special order parts and are NOT subject to return for credit or exchange. Please refer to our website piston pricing for exceptions to this. Engine pistons and rings are subject to the following limitations on their return. Except for <u>special order</u> piston sets, other types are returnable within 60 days of the invoice date if A) The carton has NOT been opened with its seal broken, and B) the carton is not smudged with grease marks or finger prints. Be sure to confirm the final bore size of your block BEFORE you order pistons and rings.

#### **TERMS OF SALE - Continued**

<u>MERCHANDISE RETURNS</u> Continued: Electrical or electronic merchandise (such as ignition parts, starting system parts, etc) are NOT subject to return for credit. All sales of such electrical/electronic components are considered final. Merchandise found to be defective must be returned <u>with prior authorization only</u>. Upon inspection, any defective electric components will be replaced if our inventory supports it, or credited to you if we cannot replace it. Items will be replaced or credited at the sole discretion of VANPELT SALES LLC. NO returns after 60 days from the invoice date.

METHOD OF SHIPPING: We normally use UPS or the US Postal Service for most parts orders, and will ship using our discretion for the most efficient and cost-effective method. Some items tend to fare better with one shipper than another. If you prefer one over the other, please make that request at the time you place your order, and we will try to accommodate your preference. Some parts come to us in little or no packaging that is suitable to re-shipment. When packing your order we often have to use additional packing materials, or specialized cartons, which may result in a small extra charge beyond the actual shipping costs. Most orders that are shipped via the USPS will require their specialized extra services (insurance, etc). UPS also charges extra for any insurance beyond the basic \$100.00 coverage. Any such extra charges will be added to the actual freight shipping costs. A correct physical address is important for UPS or USPS deliveries. The post office will often not deliver a package that has no mail receptacle at the residence, so consider using a post office box. Any re-shipping costs incurred due to inaccurate addresses will be the responsibility of the buyer. The minimum shipping charge is \$10.00.

<u>LOST SHIPMENTS</u>: We use shipping that provides tracking. We will work with the USPS or UPS to try to track your missing shipment. International shipments are sent via the USPS postal Priority Mail and tracking details are minimal once the shipment leaves the USA and goes into a foreign postal system. We must wait a minimum of 35 days before we can begin any claims for lost international shipments, and the process can take additional weeks before a determination is made, so we must ask for your patience on these matters.

**PRICING**: All prices are quoted in US dollars. Prices are subject to change without notice. Prices will be those in effect at the time of the order. Please confirm your cost when placing an order as printed prices or online pricing could change.

**INTERNATIONAL CUSTOMERS:** Due to the additional customs paperwork, we must add a \$10.00 documentation charge to all orders. This fee is per carton, since each package must have its own customs form. This charge will be added to your invoice and identified as a "Document Fee".

**BRAND PARTS:** Parts offered for sale herein may be NOS (new-old-stock), or NORS (new-old-replacement-stock), or modern new aftermarket brand parts, or modern new reproduction parts. <u>Used</u> parts are identified as such where available and sold. We will supply new parts on all orders, unless otherwise requested by the customer, or where the only part available is a used item (which is stated in our pricing). Our new parts could be from any of the aforementioned sources. Please inquire when ordering if this is important to your needs.

PART NUMBER APPLICATIONS: Many part numbers listed in our catalog or online include a model year reference, which generally spans the earliest to the latest models that could have used this particular part. Sometimes, the overall span of model years can include both cars and trucks, but perhaps the part was not used for the full duration on your vehicle. Or the part may have specific applications that are defined by your engine or other driveline details. The model year reference is a <u>guide</u> only since we do not have room to include all the possible variations in the catalog. If your vehicle is a custom-built type with components from different model years, the part you want may not have been used in the model year as used on your title. Please check your application to make sure the part will apply to your vehicle before ordering, in order to avoid returns and restocking charges.

<u>PARTS ORDER QUANTITIES</u>: In general, you may order in any quantity needed. However, certain parts or other products may be in limited supply. The fact that any particular item is listed with a purchase price does not guarantee its unlimited availability. We reserve the right to limit order quantities at our discretion, whether for a limited time or on a permanent basis. If large quantities for any products are required please contact us to discuss the issue.
